ANALYSES OF NATURAL GASES, 1985

By B. J. Moore[1] and Stella Sigler[2]

ABSTRACT

This publication contains analyses and related source data for 517 natural gas samples from 25 States and 1 foreign country. Of the total samples, 298 were collected during calendar year 1985; the remainder were collected earlier, but releases granting permission to publish were not received before 1985. All samples were obtained and analyzed as part of Bureau of Mines investigations of the occurrences of helium in natural gases of countries with free market economies. This survey has been conducted since 1917. The analyses published herein were made by mass spectrometer and chromatograph.

INTRODUCTION

This Bureau of Mines publication contains analyses and related source data for 517 natural gas samples from 25 States and 1 foreign country. Of these samples, 298 were collected during calendar year 1985, 219 samples were collected earlier, but releases granting permission to publish were not received before 1985. All samples were obtained and analyzed as part of Bureau of Mines investigations of the occurrences of helium in natural gases of countries with free market economies. This survey has been conducted since 1917. The analyses published herein were made by mass spectrometer and chromatograph.

The results of these investigations are published annually to make the information available to the petroleum industry and the general public. Twenty-nine publications have presented the results of 14,233 gas analyses made prior to 1985. The first three bulletins (1-3)[3] contain analyses and related source data on 5,218 gas samples collected from 1917 through 1960; these bulletins have been supplemented annually by information circulars (4-17, 19-24, 26-29) containing 8,729 analyses of samples collected since 1960.

In 1976, a compilation of the analyses made prior to 1975 was prepared by the Bureau of Mines and published by the National Technical Information Service of the U.S. Department of Commerce (18). This compilation contains 10,562 analyses of gas samples from gas and oil wells and natural gas pipelines in 37 States and 23 foreign countries. In 1982, a compilation of analyses made prior to 1980 was published (25). The 1982 publication contains 12,554 analyses of gas samples from gas and oil wells and natural gas pipelines in 39 States and 24 foreign countries and includes the analyses from the 1976 publication.

In addition to being in the publications, all analyses and related information published through 1984 are available on a magnetic tape file. The tape is available for $160 from the National Technical Information Service, Springfield, VA 22151; orders should refer to Bureau of Mines tape PB 85-200350.

ACKNOWLEDGMENTS

The helium survey program is conducted by soliciting natural gas samples throughout the United States and other countries with free market economies. Without the assistance of the petroleum industry, State and Federal agencies, and many individuals engaged in oil and gas exploration and production, the helium survey in its present scope would not be possible. The analyses listed in the tables were made by the Section of Technical and Analytical Services, Helium Field Operations, Bureau of Mines, Amarillo, TX. The list of analyses was produced through use of a computer by the Section of Automatic Data Processing, Helium Field Operations, Bureau of Mines, Amarillo, TX.

GEOLOGIC PROVINCES OF THE UNITED STATES

The tables include geologic province codes so each sample source can be located within a specific geologic province as defined by the Committee on Statistics of Drilling of the American Association of Petroleum Geologists.[4] These provinces, which are given in the following list and shown in figure 1, are delineated by political boundaries for convenience and for accommodation of data processing equipment. Not all of the provinces shown are gas-producing areas, so many of the codes are not used in this publication. Since State or Federal ownership is not always known in offshore areas, only one code is used for each State. Owing to the lack of information on the location of wells in Alaska, only one code, 972, is used for all wells.

The following list and figure 1 are taken from the article cited in footnote 4.

[3]Underlined numbers in parentheses refer to items in the list of previous publications at the end of this report.

TABLES

The following tables include the results of analyses and related source data from gas samples, which are divided into three groups as follows:

Table 1. - Samples from gas and oil wells in the United States.

Table 2. - Samples from pipelines in the United States.

Table 3. - Samples from gas and oil wells in foreign countries.

The following list indicates the sources of the samples listed in the tables:

Source	Number of samples	Tables	Source	Number of samples	Tables
Alabama	15	1	New Mexico	29	1, 2
Alaska	1	1	New York	8	1
Arkansas	36	1	North Dakota	7	1
California	12	1, 2	Ohio	3	1
Colorado	48	1, 2	Oklahoma	103	1
Illinois	2	1	Pennsylvania	7	1, 2
Indiana	4	1	Tennessee	5	1
Kansas	22	1	Texas	81	1
Kentucky	2	1	Utah	12	1, 2
Louisiana	38	1	West Virginia	9	1
Michigan	3	1	Wyoming	48	1, 2
Mississippi	14	1			
Montana	4	1	Thailand	1	3
Nebraska	3	1, 2			

All components of the analyses in the tables are reported to the nearest 0.1 pct, except helium, which is reported to the nearest 0.01 pct. The word "trace" is used to denote quantities of helium of less than 0.005 pct and quantities of other components of less than 0.05 pct.
